

June 27, 2018

Hardcast continues to exceed expectations by voluntarily submitting its products to UL Environment's GREENGUARD Certification Program. Hardcast's line of water-based duct sealants and mastics have been awarded UL GREENGUARD and UL GREENGUARD Gold Certifications.

The qualifying products can be found on the [UL SPOT website](#) in the Master Format section for HVAC Ducts and Casings 23 3100.

The Hardcast products certified by UL Environment will help specifiers meet requirements on numerous green building design programs and building codes, including LEED, GSA Advantage!, the Collaborative for High Performance Schools (CHPS), the International Green Construction Code (IgCC), and European Union guidelines and directives. GREENGUARD certified products meet stringent chemical emission requirements and have been screened for more than 10,000 volatile organic compounds (VOCs). UL Environmental product certification and UL Environmental claim validation marks indicate transparency and trustworthiness, giving customers confidence in their purchases and specifications.

Hardcast duct sealing products undergo routine monitoring and annual testing to maintain these certifications. Hardcast is committed to full disclosure about all of its products and have formulated duct sealants for a lifetime of performance with stringent environmental standards to safeguard the building occupants against long-term harmful chemical emissions. The comprehensive science, vigorous certification requirements, and third-party status that back the GREENGUARD Certification Program differentiate these certified products in the marketplace. Demand the best, demand Hardcast!

UL Environment, a division of UL (Underwriters Laboratories), works to advance global sustainability, environmental health, and safety by supporting the growth and development of environmentally preferable products, services, and organizations. For more information, visit [www.ul.com/environment](http://www.ul.com/environment).

Hardcast is in the process of updating TDSs, packaging, and marketing information to reflect the GREENGUARD Gold certification.
