

Smoke & Soot

Hardcast offers innovative products for residential and commercial applications.

Smoke & Soot is our answer to offering a product that is third-party tested and certified so you know the product performs.

Things to consider when there's fire and smoke damage

Why choose Smoke & Soot?

Hardcast Smoke & Soot is a spray-applied coating that resists microbial growth, locks down offensive particles, and removes odors from the air-stream below the detectable limit. Designed with EPA registered chemicals, this coating can be used on wood, metal, drywall, cement, cinder block, and insulation that has been exposed to smoke and soot from a fire to negate the need to replace the entire duct, but merely resurface it. Once the surface has been cleaned, the user can apply the homogeneous coating to lock down all remaining offensive particulate and create a barrier through which no palpable scent can escape. Smoke & Soot is available in two colors: white, for true visualization of cleanliness; and black, for the complete concealment of the surface.

TYPICAL PROPERTIES AND CHARACTERISTICS

3rd Party Environmental Testing

Test #1: PNAH
(Polynuclear Aromatic Hydrocarbon)
Test #2: Respirable Particulate

Results #1: Reduced
After Coating
Results #2: Significant
Reduction

Fungus Resistance

ASTM G21

Pass

VOC Limitation

SCAQMD Rule 1168

Pass

Adhesion-in-Peel (on galvanized metal)

ASTM C794-10

Peak Peel Strength
7.15-11.5 LBF
