

The Lifeblood for Your Building's Health

“Hardcast Spray-Seal™ is revolutionizing the way we seal and test the ductwork.”

— Mark Spiezio, Mid-Atlantic Mechanical VP of Operations

HVAC Systems are like human bodies: internal components must cooperate to run at peak efficiency. Your circulatory system transports oxygen and nutrients throughout the body, keeping you fit and full of energy. A building's HVAC system transports controlled and conditioned airflow throughout the facility when the ductwork is properly installed, sealed, tested and maintained. The Hardcast Spray-Seal Mobile Sealant Delivery System is a one-of-a-kind portable system, providing an easier, more

efficient method for sealing the ductwork with a specially engineered LEED-compliant, water-based sealant. Do not leave the health of your facility to chance...specify Hardcast Spray-Seal.

Seal for Life™ your building's circulatory system with Hardcast duct sealants and adhesives and DynAir airflow hardware from Carlisle HVAC.
